Sameer Abdullah

Software, Security & AI | Founder & CEO, Lumera Creative | Computer Science (B.S., 2027)
Los Angeles, CA 90020 | abdusameer0001@gmail.com | 213-476-5798 | linkedin.com/in/sameer-abdullah-508268273 | github.com/Intentity | abdusameer.github.io/sameerabdullah.github.io

PROFESSIONAL SUMMARY

Computer Science student (Cybersecurity & AI) and Founder & CEO of Lumera Creative LLC who builds secure, full-stack software. Currently developing Lumera PO, a multi-tenant purchase-order platform with Keycloak authentication, PostgreSQL Row-Level Security, encrypted document storage, and an asynchronous extraction pipeline. Uses Claude Code as part of development and verifies the work with automated browser, authorization, and mutation tests. Google Cybersecurity Professional Certificate; pursuing CompTIA Security+.

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C++, HTML/CSS
Full-Stack: Next.js, React, Tailwind CSS, FastAPI, Pydantic, SQLAlchemy, Alembic, Flask
Security Engineering: Keycloak, OAuth 2.0 / OpenID Connect with PKCE, MFA, Role-Based Access Control, Multi-Tenant Isolation, AES-256-GCM, Audit Logging
Data & Infrastructure: PostgreSQL (Row-Level Security), Redis, Dramatiq, Docker, Docker Compose, Linux (Ubuntu, Kali), WSL 2, Git/GitHub
Testing & AI-Assisted Development: Claude Code, Model Context Protocol (MCP), Chromium Browser Testing, Mutation Testing, Adversarial Authorization Testing, Secret & Vulnerability Scanning
Cybersecurity & Networking: Threat Detection, Packet Analysis (Scapy, Wireshark), Nmap, Burp Suite, Metasploit, SIEM (Splunk), IAM, Active Directory, TCP/IP, DNS, Firewalls
Languages Spoken: English (Fluent), Tamil (Fluent), Sinhala (Fluent), Korean (Beginner), Spanish (Beginner)

PROJECTS

Lumera PO — Purchase-Order Automation Platform (Lumera Creative) Active development
Next.js, TypeScript, FastAPI, PostgreSQL, Redis, Dramatiq, Keycloak, Docker Compose
- Developing a multi-tenant SaaS application that turns wholesale purchase-order PDFs into structured, reviewable order data for distributors
- Implemented Keycloak sign-in (OIDC, PKCE, MFA) with four organization roles, and enforced tenant isolation with app-level authorization and PostgreSQL Row-Level Security
- Built encrypted PDF upload and storage (AES-256-GCM) with isolated file validation, duplicate detection, integrity checks, and audit history
- Designed an asynchronous extraction pipeline, verified against a deterministic mock provider, with deterministic decimal-based validation kept separate from AI output
- Hardened the mutation-testing harness with a recovery journal, locking, and source-integrity checks after an interrupted run left mutated code behind

kbot — Prediction-Market Research In progress
Kalshi 15-minute Bitcoin markets
- Collect market data and run paper-trading experiments (no live funds) to analyze how entry timing and holding time relate to outcomes
- Built a dashboard to inspect and compare experiment results

Roblox Battleground Game In development
Roblox Studio, Claude Code
- Free-for-all battleground where each player spawns with a random power; focused on responsive combat, clear effects, and animation

Link Scanner — Offline URL Threat Detector July 2026
Python, Flask, JavaScript · github.com/Intentity/link-scanner
- Built an offline web app that scores URLs with 19 heuristics (entropy, typosquatting, punycode, disguised extensions) to flag phishing and malware delivery without external APIs
- Fixed a compound country-code TLD parsing bug that misclassified a known real-world phishing domain

Network Traffic Analyzer June 2026
Python, Scapy · github.com/Intentity/network-traffic-analyzer
- Detects port scans, anomalous DNS, and plaintext credentials in packet captures; analyzed a real Xworm RAT sample for 2 weeks and built a C2 detector that flagged both malicious IPs

EXPERIENCE

Founder & CEO, *Lumera Creative LLC* 2026 – Present
- Lead a two-person company building software and automation for businesses; own architecture, development, testing, and delivery
- Built concept websites for local businesses and an interactive Voice Receptionist demo that runs on sample data

Pharmacy Teller, *CVS Pharmacy*, Los Angeles, CA 2023 – June 2026
- Resolved hundreds of customer inquiries and calls per day in a high-volume environment, including inventory and point-of-sale systems
- Trained new team members on point-of-sale systems, compliance procedures, and service standards

CERTIFICATIONS

Google Cybersecurity Professional Certificate (Completed); CompTIA Security+ (In Progress)

EDUCATION

California State University, Los Angeles — B.S. Computer Science, Specialty: Cybersecurity & AI 2022 – 2027 (Expected)
