Sameer Abdullah

Los Angeles, CA 90020 | abdusameer0001@gmail.com | 213-476-5798 | linkedin.com/in/sameer-abdullah-508268273 | github.com/Intentity | sameerabdullah.github.io

PROFESSIONAL SUMMARY

Founder & CEO of Lumera Creative LLC and Computer Science student specializing in Cybersecurity and Artificial Intelligence. Builds working software end to end, from security tools such as an offline URL threat-analysis scanner and a network traffic intrusion detector, to client-facing websites and AI automation prototypes. Completed the Google Cybersecurity Professional Certificate and currently pursuing CompTIA Security+. Combines technical security depth with business ownership and real-world customer-facing experience; strong troubleshooter and independent problem-solver.

SKILLS

Cybersecurity & Threat Detection: Heuristic-Based Threat Detection, Packet/Traffic Analysis (Scapy, Wireshark), Malware Indicator Analysis, Vulnerability Assessment & Awareness, Penetration Testing Basics (Nmap, Burp Suite, Metasploit), Security Best Practices

Networking Fundamentals: TCP/IP, DNS, HTTP/HTTPS, Firewalls, VPNs, Subnetting, OSI Model

Systems & Security Administration: Linux (Kali, Ubuntu) & Windows Administration, Active Directory Basics, SIEM & Log Analysis (Splunk), Identity & Access Management (IAM)

AI Engineering & Automation: Claude Code, Model Context Protocol (MCP), API Integration, AI-Assisted Development, Workflow Automation, AI Image & Video Generation

Web & Creative (Lumera Creative): JavaScript, HTML/CSS, GSAP Scroll Animation, Blender (3D), Frame-Sequence (WebP) Pipelines, Lighthouse Performance Tuning, Responsive Design, GitHub Pages

Programming Languages: Python, Java, C++, TypeScript, JavaScript, HTML/CSS

Frameworks & Platforms: Flask, React Native, Supabase, Git/GitHub

IT & Systems Support: Technical Troubleshooting, API Integration, Point-of-Sale Systems, Microsoft Office/365

Languages: English (Fluent), Tamil (Fluent), Sinhala (Fluent), Korean (Beginner), Spanish (Beginner)

EXPERIENCE

Founder & CEO 2026 – Present

Lumera Creative LLC — Creative technology & automation studio Los Angeles, CA

- Founded and lead a two-person studio that designs and builds websites, scroll-driven brand experiences, and AI automation for small businesses
- Delivered seven projects in 2026, mostly independent concept sites for Los Angeles businesses, with pre-rendered image-sequence animation, mobile touch handling, and performance tuned with Lighthouse
- Prototyped a Voice Receptionist demo showing how phone calls become appointments, inquiries, reservations, and orders; workflow integrations are in development
- Own client strategy, design direction, development, QA, and deployment end to end

Pharmacy Teller 2023 – June 2026

CVS Pharmacy Los Angeles, CA

- Delivered customer-focused technical and operational support in a high-volume, fast-paced environment, including medication inventory systems, restocking workflows, and stock-level monitoring
- Resolved hundreds of customer inquiries and calls per day accurately and within service-time expectations
- Coordinated with pharmacists and team members to process transactions and maintain compliance with company procedures
- Trained new team members on point-of-sale systems, operational protocols, and customer service standards

CERTIFICATIONS

- CompTIA Security+ (In Progress)
- Google Cybersecurity Professional Certificate (Completed)

PROJECTS

Link Scanner — Offline URL Threat Detector **github.com/Intentity/link-scanner** July 2026

Python, Flask, JavaScript

- Built a full-stack offline threat-detection web application that analyzes URLs using 19 independent heuristics to identify phishing, malware-delivery, and ransomware/scam patterns without relying on external APIs

- Implemented detection techniques including Shannon entropy analysis for algorithmically-generated domains, Levenshtein-distance typosquatting detection, punycode/homograph identification, and disguised file-extension analysis
- Diagnosed and resolved a domain-parsing edge case involving compound country-code TLDs that caused a known real-world phishing domain to be misclassified, improving detection accuracy

Network Traffic Analyzer **github.com/Intentity/network-traffic-analyzer** June 2026

Python, Scapy

- Built a Python tool using Scapy to parse packet captures and detect indicators of compromise, including port scans, anomalous DNS activity, and plaintext credential exposure
- Investigated a real Xworm RAT malware sample over 2 weeks of continuous analysis; when initial detectors found nothing, manually analyzed traffic patterns, identified a sustained-session C2 signature, and built a new detector that correctly flagged both malicious IPs

LA Resource Hub App January 2026 – May 2026

React Native, TypeScript, Supabase

- Developed and maintained a cross-platform mobile application connecting users to housing, food, and mental health resources across Los Angeles, with map-based search and location filtering
- Implemented offline access, push notifications, and multi-language support
- Collaborated within an Agile team environment; reconstructed and documented the full project after loss of the original repository

EDUCATION

California State University, Los Angeles (CSULA) 2027 (Currently Enrolled)

Bachelor of Science in Computer Science, Specialty: Cybersecurity & Artificial Intelligence. 2022 – 2027. Senior; AI & Security Lead, senior design project.
