PROFESSIONAL SUMMARY

Founder & CEO of Lumera Creative LLC and Computer Science student specializing in Cybersecurity and Artificial Intelligence. Builds working security tools (offline URL threat scanner, network intrusion detector), client websites, and AI automation prototypes. Completed the Google Cybersecurity Professional Certificate and currently pursuing CompTIA Security+. Combines technical security depth with business ownership and real-world customer-facing experience; strong troubleshooter and independent problem-solver.

SKILLS

Cybersecurity & Threat Detection: Heuristic-Based Threat Detection, Packet/Traffic Analysis (Scapy, Wireshark), Malware Indicator Analysis, Vulnerability Assessment, Penetration Testing Basics (Nmap, Burp Suite, Metasploit)
Networking Fundamentals: TCP/IP, DNS, HTTP/HTTPS, Firewalls, VPNs, Subnetting, OSI Model
Systems & Security Administration: Linux (Kali, Ubuntu) & Windows Administration, Active Directory Basics, SIEM & Log Analysis (Splunk), Identity & Access Management (IAM)
AI Engineering & Automation: Claude Code, Model Context Protocol (MCP), API Integration, AI-Assisted Development, Workflow Automation, AI Image & Video Generation
Web & Creative (Lumera Creative): JavaScript, HTML/CSS, GSAP Scroll Animation, Blender (3D), Frame-Sequence (WebP) Pipelines, Lighthouse Performance Tuning, Responsive Design, GitHub Pages
Programming & Frameworks: Python, Java, C++, TypeScript, JavaScript, HTML/CSS; Flask, React Native, Supabase, Git/GitHub
IT & Systems Support: Technical Troubleshooting, API Integration, Point-of-Sale Systems, Microsoft Office/365
Languages: English (Fluent), Tamil (Fluent), Sinhala (Fluent), Korean (Beginner), Spanish (Beginner)

EXPERIENCE

Founder & CEO 2026 – Present
Lumera Creative LLC — Creative technology & automation studio Los Angeles, CA

- Founded and lead a two-person studio that designs and builds websites, scroll-driven brand experiences, and AI automation for small businesses
- Delivered seven projects in 2026, mostly independent concept sites for Los Angeles businesses, with image-sequence scroll animation, mobile touch handling, and Lighthouse performance tuning
- Prototyped a Voice Receptionist demo showing how phone calls become appointments, inquiries, reservations, and orders; workflow integrations are in development
- Own client strategy, design, development, QA, and deployment end to end

Pharmacy Teller 2023 – June 2026
CVS Pharmacy Los Angeles, CA

- Delivered technical and operational support in a high-volume environment, including inventory systems and stock-level monitoring
- Resolved hundreds of customer inquiries and calls per day within service-time expectations
- Coordinated with pharmacists to process transactions and maintain compliance
- Trained new team members on point-of-sale systems and service standards

CERTIFICATIONS

- CompTIA Security+ (In Progress)
- Google Cybersecurity Professional Certificate (Completed)

PROJECTS

Link Scanner — Offline URL Threat Detector **github.com/Intentity/link-scanner** July 2026
Python, Flask, JavaScript

- Built a full-stack offline web app that analyzes URLs with 19 independent heuristics to flag phishing, malware-delivery, and scam patterns without external APIs
- Implemented Shannon entropy analysis for generated domains, Levenshtein typosquatting detection, punycode/homograph identification, and disguised file-extension analysis
- Fixed a compound country-code TLD parsing edge case that misclassified a known real-world phishing domain

Network Traffic Analyzer **github.com/Intentity/network-traffic-analyzer** June 2026
Python, Scapy

- Built a Scapy tool that parses packet captures to detect port scans, anomalous DNS activity, and plaintext credential exposure
- Analyzed a real Xworm RAT sample over 2 weeks; when initial detectors found nothing, identified a sustained-session C2 signature manually and built a new detector that flagged both malicious IPs

LA Resource Hub App January 2026 – May 2026
React Native, TypeScript, Supabase

- Built a cross-platform mobile app connecting users to housing, food, and mental health resources across Los Angeles, with map search and location filtering
- Implemented offline access, push notifications, and multi-language support; worked in an Agile team and rebuilt and documented the project after losing the original repository

EDUCATION

California State University, Los Angeles (CSULA) 2027 (Currently Enrolled)
B.S. Computer Science, Specialty: Cybersecurity & Artificial Intelligence. 2022 – 2027. AI & Security Lead, senior design project.
